Trans. of Akademiya Nauk (USSR) 1959 [v. 8] no. 5,
p. 30-33.

A study was made of the solubility of caffeine, theo-
phylline, and theobromine in sodium and potassium
chloride, bromide, iodide, and thiocyanate solutions
of concentrations between 0 and 3M. Sodium and po-
tassium iodide and thiocyanate increase the solubility
of these compounds; the chlorides and the sulphates
exert a salting-out effect, whereas the bromides have
practically no effect on the solubility. A constant
which describes the qualitative and quantitative effects
of a salt on solubility is proposed. (Author)
